

The school program

We offer lessons for all ages
from ecology and evolution
to flax preparation and utility plants.
All our lessons are curriculum based.

Some of our popular lessons are:

Watercolors and adaptation

- Paint pattern and purpose

Compost and recycling

- Who turns the peel to soil?

How do plants do it?

- How seeds are made

In search of tropical crops
and utility plants

- What does the cocoa tree look like?

Plants rest in winter, but how?

- How do they survive?

Outdoor Education

Göteborg Botanical Garden

A classroom for all school subjects

Gothenburg Botanical Garden has a growing education department which works with outdoor education for all children, youth and adults regardless of school type. Every year approximately 10 000 students take part in different activities in the garden.

Outdoor education has many benefits; it improves concentration and enhances learning ability, reduces stress levels and increases physical activity.

The Botanical Garden has an education centre with an outdoor classroom and an educational school garden where children can take part in gardening programmes.

New resources would make it possible for more classes to visit us, as the need at present is far greater than we can accommodate. One of our tasks is to reach students in the whole region of Västra Götaland

Our aims

More teachers and students to the Botanical Garden!

To be a centre for:

- outdoor education for all subjects
- teachers wanting to work more outside
- gardening with children, to inspire to greener school grounds and a greener lifestyle

Discover the amazing world of plants

In the gardens there is always something exciting to investigate. Our aim is to spread information and knowledge about the world of plants, the climate and biological diversity.

The greenhouses offer exciting environments, from tropical rainforest to dry deserts.

Welcome!
