Dear ladies and gentlemen,

it is the main target of Fresenius Kabi to offer safe solutions for patients. NR-Fit connectors were designed to increase the safety level in the field of drug administration for regional anaesthesia. It shall also prevent miss-connections with other fluids like e.g. Enteral Nutrition or IV Drugs which cause major issues when administered in the neuraxial field.

The drugs that shall be administered via NR-Fit connectors are highly efficient. Therefore it is very important that the highest available precision in flowrate accuracy can be guaranteed and in addition the lowest possible dead space of administration devices has to be taken into consideration also in regard to the amount of drugs disposed.

For these reasons Fresenius Kabi recommends syringe pumps, NR-Fit syringes and dedicated NR-Fit Lines for all NR-Fit related administration of drugs for regional anaesthesia. Only here we can guarantee the highest flowrate accuracy recommended and lowest dead space to save high efficient drugs.

These are the reasons why we are still evaluating the opportunities to further reduce the risks to provide most possible safe and efficient solution for You and Your patients.

Best regards,

Fresenius Kabi MedTech Europe
